

A programmable thermostat can help you save energy!

Programmable Thermostats

- ▶ Save energy and money, when used properly, about \$150/year
- ▶ Keep the temperature set for long periods of time (8 hrs. daytime and 10 hrs. nighttime)
- ▶ Avoid using the hold/permanent/vacation feature to manage day-to-day settings.
- ▶ Cranking your unit up to 90° or down to 40° will not heat or cool your house any faster.
- ▶ Install on an interior wall, away from heating/cooling vents and other sources of heat or drafts (doorways, windows etc.)
- ▶ Use a programmed setback thermostat for each zone if your home has multiple heating/cooling zones

You can help minimize power costs by using energy wisely.

Please wait until after 8 p.m. before using major appliances.
